

Figure 8. Histone Deacetylase Inhibitors Can Cause Tumor Regression

Computerized tomography (CT) scans of a patient with a mesothelioma. (*Left scan*) Before therapy there is a large lobulated white mass in the right lung compressing the aerated black lung (see *arrow*). (*Right scan*) 4 months after therapy with SAHA with shrinkage of the tumor and a much better expanded right lung. (Scans courtesy of Dr. Paul Marks, Memorial Sloan-Kettering Cancer Center, NY.)
